New Service for Whole Blood Everolimus Monitoring

Our Department has started from this month to provide a new service for monitoring whole blood Everolimus in transplant patients. This measurement is performed with the state-of-the-art technology: liquid chromatography tandem mass spectrometry. Each request requires a 3-ml EDTA blood pre-dose sample. The turnaround time for this new service is about one week to facilitate batch analysis. If necessary, results can be available on the same day after consultation with the Duty Biochemist.

For enquiries on further details of the whole blood Everolimus service or monitoring of other immunosuppressants, please contact our Duty Biochemist at 2632-2685, or page through PWH Operator at 2632-2211.

Thank you for your kind attention.

Sincerely,

Prof CWK Lam
